

Josh Wang

Software Developer

Specializing in React / Next.js architecture, AI-driven workflow integration, and fast product delivery

Taipei, Taiwan | spjay1@gmail.com | cv.joshwang.dev

Summary

Started as a Rails backend engineer at an AWS-affiliated company, then spent 10+ years leading React ecosystem frontend architecture

Delivered architectural ownership across 2 mobile app projects and 7+ web systems (component design, state management, CI/CD); led teams of 4–5 engineers

Now focused on overall development structure and efficiency optimization in the age of AI-driven development

AI Proficient in Claude Code and MCP for building development workflows, accelerating POC validation and iteration

Security Security-conscious engineering from TeamT5 experience — proactive defense against API and input injection vulnerabilities

Cross-platform 13-language i18n architecture, AWS deployments, React/Next.js ecosystem, React Native, and Vue 3 production experience

Key Achievements

- ▶ Reduced cloud infrastructure costs by 90%
- ▶ Supported internal systems across 50+ countries
- ▶ Built 13-language website architecture
- ▶ Reduced AI-assisted POC validation to 1.5 days
- ▶ Consolidated CI/CD branches from 5 to 2
- ▶ Patched critical CVE-2025-29927 vulnerability

Experience

Independent

Jun 2023 – Present

Front-End Technical Consultant (Project-based)

CI/CD Architecture & Security | Data Analytics SaaS Startup

- Restructured CI/CD pipeline from 5 fragmented branches to 2, optimizing Monorepo structure and reducing operational overhead
- Integrated Claude + Playwright MCP for automated Gherkin script generation, improving QA acceptance efficiency
- Patched critical CVE-2025-29927 vulnerability under time pressure, strengthening system security posture

Map System Development & Technical Debt Cleanup | Major Real Estate Group

- Served as technical lead to fill development gaps, delivering complex map POI filtering features on tight deadlines
- Adopted Claude Code AI-assisted development, reducing POC validation from weeks to 1.5 days
- Led systematic module decomposition and refactoring to resolve legacy architectural debt at the root

Vibe Coding & MCP Research

- Deep research and practice of Vibe Coding using Windsurf and Claude Code, shortening POC cycle time
- Explored Model Context Protocol (MCP) applications to improve AI collaboration efficiency on project codebases

Real-time Trading Platform | Vue 3 + Nuxt.js

- Stepped outside the React ecosystem to independently build a real-time trading platform with Vue 3 / Nuxt 3 / Pinia
- Integrated TradingView Widget and ECharts for real-time price feeds, order book visualization, and data analytics

TeamT5 (Cybersecurity)

Oct 2021 – Jun 2023

Front-End Developer

Official Website

- Migrated from Firebase/Cloudinary to AWS S3/CloudFront + Next.js, reducing cloud costs by 90% and improving reliability
- Refactored 50%+ legacy codebase, improving maintainability and reducing resource overhead
- Implemented file-upload-system with AWS SDK/TypeScript/Pica.js providing auto-thumbnail and cloud upload
- Conducted early ChatGPT-powered SEO crawler testing; findings presented to and recognized by executive team

CYBERSEC 2022/2023 & InterOp23 Event Pages

- Built event pages with Svelte and Preact.js + Tailwind CSS / CSS Module, deployed via AWS S3 + CloudFront
- Identified plaintext password transmission and auth design flaws in external vendor systems; report escalated to leadership

OEC Group (鑫亨科技)

May 2019 – Oct 2021

Front-End Developer

B2B/B2C Back-office System

- Led frontend rebuild using React Hooks and Context API, covering internal systems across 50+ countries
- Designed 100-field single-page forms using Formik / Yup / React.memo with strict validation and performance control
- Implemented real-time messaging and notifications via WebSocket
- Proposed and adopted GitHub Actions CI/CD pipeline as an early adopter upon its launch in Aug 2019

Website Redesign / Internal Training

- Took over external vendor's HTML/CSS and completed Next.js + i18n architecture within one month
- Led Pull Request Code Review culture to improve code quality and ensure requirement alignment

Earlier Experience

Startups (Fullinn, CatFi, myTreat, Ecowork)

Jul 2014 – Apr 2019

Web Developer

Frontend Architecture & SEO | Fullinn

- Led frontend architecture using Next.js SSR to build an SEO-optimized website builder for hotel operators
- First client ranked on Google's first page within one week of launch
- Introduced Flow.js and ESLint to reduce Code Review overhead and improve code reliability

Mobile & Cross-platform Development | Fullinn, CatFi

- Built cross-platform mobile apps with React Native, Redux, and Redux-saga for state and side effect management
- Integrated Firebase Push Notification and Code Push to reduce deploy costs and streamline push services
- Adopted Fabric and OneSignal for crash reporting and push; integrated WebRTC / RTMP streaming

Full-stack Development & API Design | Fullinn, myTreat, Ecowork

- Built OTA platform and order system with React.js / GraphQL; migrated project from Redux to Apollo 2.0
- Led initial REST API format design, establishing API conventions to streamline backend development
- Delivered full-stack features and standalone customer service back-office using Rails and Angular.js

Testing & Dev Workflow | Ecowork

- Implemented Cucumber and RSpec to fulfill client test report requirements; assisted DevOps in building automated test environments
- Introduced Vagrant-based deployment workflow to unify dev environments for faster onboarding

Education

Wenzao Ursuline University of Languages

Sep 2009 – Jun 2013

B.A. Digital Content Application and Management

Skills

Core	React.js / Next.js / TypeScript
Frontend	Redux / React Context / Tailwind CSS / Sass / GraphQL / Vue.js / Nuxt.js
Backend	Node.js / Rails / Koa / AWS (S3, CloudFront) / Docker
Mobile	React Native / Code Push / Fabric / TestFlight
AI Workflow	Claude Code / MCP / Windsurf / Playwright
CI/CD & Testing	GitHub Actions / GitLab Runner / Jest / Cucumber
